To build a **self-learning trading bot for Solana memecoins**, you need **three information layers**:

1. **Structured news (RSS feeds)** → reliable, lower noise
2. **Social sentiment (Reddit + X)** → early hype detection
3. **On-chain / launch data** → earliest signals before news

I'll give you **real RSS feeds, Reddit streams, and X sources** that traders and bots actually use.

1️⃣ Best RSS Feeds for Solana & Memecoin News

These are **structured, machine-readable sources** your bot can poll every few minutes.

Core Solana ecosystem feeds

Use these for **official announcements, ecosystem updates, partnerships**.

Source	RSS Feed
Solana Official News	https://solana.com/news/rss
DappRadar (Solana tag)	https://dappradar.com/blog/tag/solana/feed
U.Today Solana News	https://u.today/solana-news/rss
Investing.com Solana News	https://www.investing.com/rss/news_301.rss

Solana ecosystem news often signals **liquidity rotation into the chain**, which impacts meme coins. (RSS Database - FeedSpot)

Crypto news (memecoin coverage)

These are the **highest-signal crypto news outlets**.

Source	RSS
CoinDesk	https://www.coindesk.com/arc/outboundfeeds/rss/
The Block	https://www.theblock.co/rss.xml
CryptoSlate	https://cryptoslate.com/feed/
CoinTelegraph	https://cointelegraph.com/rss
Decrypt	https://decrypt.co/feed

These outlets frequently break **memecoin narratives and trends**.

Memecoin-focused feeds

These capture **viral token narratives**.

Source	RSS
CoinSpeaker memecoin section	https://www.coinspeaker.com/tag/meme-coins/feed
CryptoNews memecoin	https://cryptonews.com/news/meme-coins/feed

CryptoPotato	https://cryptopotato.com/feed

Solana has become a **major hub for memecoin experimentation**, with billions in meme-token market cap. (Coinspeaker)

2️⃣ Reddit Sources (High Alpha)

Reddit is extremely valuable for **early narrative detection**.

Your bot should monitor these subreddits.

Primary subreddits

- https://www.reddit.com/r/solana/.rss
- https://www.reddit.com/r/SolanaMemeCoins/.rss
- https://www.reddit.com/r/memecoins/.rss
- https://www.reddit.com/r/CryptoCurrency/.rss

Example:

https://www.reddit.com/r/solana/new/.rss

These communities often discuss **new tokens, launchpads, and trading strategies** before mainstream media picks them up. (Reddit)

Example insight from traders:

> "Memecoins on Solana are PvP… volume is your friend." (Reddit)

Which tells you:

- Volume spikes are predictive
- Early liquidity matters

Reddit strategy for your bot

Track:

- post frequency
- token ticker mentions

- sentiment
- upvote velocity
- comment velocity

Example metric:

```
token_score =

  mention_count * 0.4 +

  upvote_velocity * 0.3 +

  comment_velocity * 0.3
```

3️⃣ X (Twitter) Sources – Most Important

90% of memecoin alpha comes from X first.

Your bot should track:

Influencers

- @SolanaFloor
- @SolanaDailyNews
- @SolanaLegend
- @SolanaSensei
- @solanafloor

Example Solana news account exists specifically for ecosystem updates. (X (formerly Twitter))

Memecoin hunters

Track:

- launch threads
- contract addresses
- DEX links

Important accounts:

@degentrading

@SolanaMemeCoins

@SolanaSensei

@0xMert_

@SolBigBrain

X scraping strategy

Your bot should track:

- hashtags
- ticker mentions
- CA addresses
- trending tweets

Example queries:

"solana memecoin"

"$BONK"

"$WIF"

"pump.fun"

"new solana token"

---

4 Bonus: RSS Feeds for X (Hack)

X doesn't provide RSS directly, but you can generate them.

Example service:

https://nitter.net/<username>/rss

Example:

https://nitter.net/SolanaFloor/rss

5️⃣ Data Sources That Are EVEN MORE IMPORTANT

Real memecoin traders **don't rely only on news**.

They track:

Token creation feeds

Pump.fun launches:

https://pump.fun/

Dex Screener API:

https://api.dexscreener.com/latest/dex/tokens

Birdeye API:

https://public-api.birdeye.so

On-chain signals

Important indicators:

- liquidity added
- wallet clustering
- holder distribution
- whale buys

Research shows tens of thousands of memecoins launch via automated launchpads, creating huge transaction volumes and patterns detectable with ML. (arXiv)

6️⃣ Recommended Architecture for Your Bot

This is the **real pipeline used by crypto quant teams**.

DATA LAYER

RSS feeds

Reddit

X posts

DEX APIs

On-chain data

NLP LAYER

---

sentiment analysis

token extraction

entity recognition

SIGNAL LAYER

---

hype score

volume score

wallet activity

TRADING LAYER

---

risk filter

position sizing

execution bot

---

7 Critical Insight (Most Important)

Your bot **must rank sources by reliability**.

Example weighting:

Source	Trust
On-chain	0.9
DEX liquidity	0.8
X influencer	0.6
Reddit	0.4
News	0.3

Because **memecoin narratives start socially and move to news later**.

Since you're building a **self-learning trading bot**, the biggest edge will not come from just RSS feeds — it comes from **detecting narratives before the market notices**. Serious crypto quant teams combine **social signals + on-chain signals + launchpad monitoring**.

Below is the **real “alpha stack” used by Solana memecoin hunters**. 🚀

1️⃣ Top X (Twitter) Accounts That Move Solana Memecoins

These accounts frequently **start or amplify memecoin narratives**.

Solana ecosystem news

- Solana Foundation (@Solana)
- SolanaFloor
- Solana Daily

These accounts **confirm legitimacy** after a token starts trending.

Solana traders / whales

These are **early alpha sources**.

- Mert Mumtaz (@0xMert_)
- Ansem
- CryptoKaleo

When these traders tweet about a token, **volume often spikes within minutes**.

Memecoin discovery accounts

Your bot should scrape these heavily.

Examples:

- @SolanaMemeCoins
- @SolTrending
- @DegenerateNews
- @SolanaLegend

These accounts usually post:

- new token contracts
- pump.fun launches
- whale buys

2️⃣ The Most Important Platform for Solana Memecoins

Most Solana memecoins now launch on:

pump.fun

This platform lets anyone create a token instantly.

Why it matters

Most viral tokens start here **before they hit DEXs or news sites**.

Your bot should monitor:

- new token creation
- bonding curve progress
- early buyers
- liquidity unlock

Example pump.fun signals

Good signal:

token created
+
bonding curve reaches 50%
+
large wallet buys
+
X mentions increasing

Bad signal:

creator holds >50%
+
liquidity < $5k
+
no social mentions

3️⃣ On-Chain Data Sources (Highest Signal)

Your bot should pull data from these Solana analytics platforms.

DEX analytics

Dexscreener

API example:

https://api.dexscreener.com/latest/dex/tokens/<token>

Key metrics:

- liquidity
- volume
- price change
- holder count

Wallet analytics

Birdeye

Track:

- whale wallets
- smart money wallets
- token flows

On-chain explorer

Solscan

Use it for:

- wallet clustering
- contract verification
- transaction analysis

4️⃣ How Quant Bots Detect 100x Memecoins Early

Professional bots look for **3 simultaneous signals**.

1️⃣ Social spike

Mentions increasing on:

- X
- Reddit
- Telegram

Example metric:

mention_velocity = mentions_last_10m / mentions_last_1h

2️⃣ Liquidity spike

Example:

liquidity_added > $50k
+
volume growth > 200%

3️⃣ Smart wallet buys

Example:

wallet_tag = profitable_trader
+
buy_size > $5k

Combined signal score

Example:

signal_score =

```
social_score * 0.3 +
liquidity_score * 0.4 +
smart_money_score * 0.3
```

Trade only if:

signal_score > 0.75

---

5 AI Pipeline for Your Trading Bot

Since you want a **self-learning system**, this architecture works best.

```
        DATA SOURCES
--------------------------------
RSS feeds
Reddit
X posts
DEX APIs
On-chain data
pump.fun launches

        PROCESSING
--------------------------------
NLP sentiment analysis
token ticker extraction
wallet pattern detection

        SIGNAL ENGINE
--------------------------------
hype score
volume score
liquidity score
smart wallet score

        ML MODEL
--------------------------------
predict probability of pump

        EXECUTION
--------------------------------
```

risk filter
position sizing
auto trade

---

6 Reddit Signals Your Bot Should Track

Monitor:

- r/solana
- r/CryptoCurrency
- r/memecoins

Signals:

- sudden token mentions
- high upvote velocity
- long discussion threads

Example:

upvote_velocity = upvotes / minutes_since_post

---

7 X Narrative Detection Strategy

Memecoin markets move on **narratives**.

Examples:

Narrative	Example
Dog coins	$DOGE
Hat memes	$WIF
Frog memes	$PEPE
Political memes	election coins

Your bot should detect **new narrative clusters**.

Example NLP task:

topic clustering on tweets

---

8 The Real Secret Edge (Most Bots Miss This)

Track **wallet behavior of successful traders**.

Steps:

1. Identify profitable wallets
2. Track their buys
3. copy signals

Example rule:

```
if 3 smart wallets buy same token within 10 minutes:
    high probability pump
```

---

9 Extra Data Sources (Hidden Alpha)

These are **very powerful for memecoin bots**.

Telegram monitoring

Many tokens pump from Telegram groups first.

Example signals:

- contract addresses posted
- call channels

Launchpad monitoring

Watch:

- Raydium
- Jupiter

New listings often trigger pumps.

🔟 One Huge Warning

Memecoin markets are **extremely manipulated**.

Your bot must filter:

- honeypots
- rug pulls
- fake liquidity

Always check:

lp_locked
+
top_holder_percentage
+
mint_authority

Trading Bot Research: High-Signal Data Stack for Solana Memecoins

To develop a **self-learning trading bot focused on Solana memecoins**, success hinges on integrating and prioritizing three critical information streams:

1. **On-chain / Launch Data:** Provides the **earliest, highest-trust signals** (e.g., liquidity, wallet activity).
2. **Social Sentiment (X and Reddit):** Crucial for **early narrative and hype detection**.
3. **Structured News (RSS Feeds):** Offers reliable, lower-noise validation and context.

The most significant edge comes from **detecting narratives before the market notices**, achieved by combining social signals, on-chain data, and launchpad monitoring.-----1. On-Chain and Launch Monitoring (The Highest Signal)

Real traders rely heavily on this layer. These sources are most important and should have the highest trust weighting in your bot's logic.🚀 **Primary Launch Platform: pump.fun**

Most viral Solana memecoins launch here first. Your bot must monitor:

- New token creation events.
- Bonding curve progress (e.g., reaching 50%).
- Early buyer activity and liquidity unlock.

Good Signal Example: `token created` + `bonding curve reaches 50%` + `large wallet buys` + `X mentions increasing`.📊 **DEX and Wallet Analytics**

These platforms provide the data for quantitative signals:

Platform	Key Metrics to Track	API/Source
Dexscreener	Liquidity, Volume, Price Change, Holder Count.	https://api.dexscreener.com/latest/dex/tokens/<token>
Birdeye	Whale/Smart Money wallet tracking, Token flows.	https://public-api.birdeye.so
Solscan	Wallet clustering, Contract verification, Transaction analysis.	*On-chain explorer*
Pump.fun	Token creation feeds.	https://pump.fun/

🧠 **Quant Bot Signal Detection**

Professional bots look for the simultaneous appearance of **3 core signals** to detect

potential 100x moves:

1. **Liquidity Spike:** e.g., `liquidity_added > $50k` + `volume growth > 200%`. (Weight: 0.4)
2. **Smart Wallet Buys:** e.g., `wallet_tag = profitable_trader` + `buy_size > $5k`. (Weight: 0.3)
3. **Social Spike:** Mentions increasing on X/Reddit/Telegram. (Weight: 0.3)

Combined Signal Score: `social_score * 0.3` + `liquidity_score * 0.4` + `smart_money_score * 0.3`. Trade only if `signal_score > 0.75`.-----2. Social Sentiment (Narrative and Hype Detection)

90% of memecoin alpha originates on X (Twitter). Reddit is also extremely valuable for early narrative detection.**X (Twitter) Sources**

Your bot should track specific accounts, hashtags, and ticker mentions. (A hack is to use services like `[https://nitter.net/](https://nitter.net/)<username>/rss` to generate RSS feeds for users).

Category	Important Accounts / Queries	Bot Strategy
Influencers/Whales	@0xMert_, Ansem, CryptoKaleo	Track when they tweet about a token (volume often spikes instantly).
Discovery/Hunters	@SolanaMemeCoins, @SolTrending, @DegenerateNews	Scrape for new token contracts, pump.fun launches, whale buys.
Ecosystem News	@Solana, @SolanaFloor, @SolanaDaily	Confirms legitimacy once a token is trending.
Tracking	`"solana memecoin"`, `"$BONK"`, `"pump.fun"`	Monitor hashtags, ticker mentions, CA addresses, trending tweets.

X Narrative Detection Strategy: Identify **new narrative clusters** (e.g., Dog coins, Hat memes) using NLP topic clustering on tweets.**Reddit Sources (High Alpha)**

Reddit is used for discussing new tokens and trading strategies. Use the RSS feed for scraping: `[https://www.reddit.com/r/](https://www.reddit.com/r/)<subreddit>/new/.rss`

Primary Subreddits	Bot Signals to Track
r/solana, r/SolanaMemeCoins, r/memecoins, r/CryptoCurrency	Post frequency, token ticker mentions,

	sentiment, **upvote velocity**, **comment velocity**.

Example Metric: `token_score = mention_count * 0.4 + upvote_velocity * 0.3 + comment_velocity * 0.3`.-----3. Structured News (RSS Feeds)

These machine-readable sources provide a reliable baseline and ecosystem context. Your bot should poll these every few minutes.**Core Solana Ecosystem**

Use these for official announcements and liquidity rotation signals:

- Solana Official News: `[https://solana.com/news/rss](https://solana.com/news/rss)`
- DappRadar (Solana tag): `[https://dappradar.com/blog/tag/solana/feed](https://dappradar.com/blog/tag/solana/feed)`
- U.Today Solana News: `[https://u.today/solana-news/rss](https://u.today/solana-news/rss)`

Crypto News (Memecoin Coverage)

These break broader memecoin narratives and trends:

- CoinDesk: `[https://www.coindesk.com/arc/outboundfeeds/rss/](https://www.coindesk.com/arc/outboundfeeds/rss/)`
- The Block: `[https://www.theblock.co/rss.xml](https://www.theblock.co/rss.xml)`
- CoinTelegraph: `[https://cointelegraph.com/rss](https://cointelegraph.com/rss)`
- CryptoSlate, Decrypt, etc.

Memecoin-Focused Feeds

Sources for viral token narratives:

- CoinSpeaker memecoin section:

https://www.coinspeaker.com/tag/meme-coins/feed
- CryptoNews memecoin: https://cryptonews.com/news/meme-coins/feed
- CryptoPotato: https://cryptopotato.com/feed

-----4. Recommended AI Architecture for a Self-Learning Bot

This pipeline is used by serious crypto quantitative teams:

Layer	Function / Outputs
DATA SOURCES	RSS feeds, Reddit, X posts, DEX APIs, On-chain data, **pump.fun launches**.
PROCESSING	NLP sentiment analysis, token ticker extraction, **wallet pattern detection**.
SIGNAL ENGINE	Hype score, Volume score, Liquidity score, **Smart wallet score**.
ML MODEL	Predict probability of a pump based on combined signals.
EXECUTION	Risk filter, Position sizing, Auto trade.

Critical Insight: Source Trust Weighting

Your bot must rank sources by reliability, reflecting the reality that memecoin narratives start socially and move to news later.

Source	Trust Weighting
On-chain	0.9
DEX liquidity	0.8
X influencer	0.6
Reddit	0.4

News	0.3

The Real Secret Edge

The most powerful signal is **tracking wallet behavior of successful traders** ("smart money").

Rule: Identify profitable wallets. If 3 smart wallets buy the same token within 10 minutes, there is a high probability of a pump.⚠️ **One Huge Warning**

Memecoin markets are heavily manipulated. Your bot must incorporate a filter to screen out honeypots, rug pulls, and fake liquidity by checking:

- `lp_locked`
- `top_holder_percentage`
- `mint_authority`
